

# IMail Server PREMIUM Version 12: Building Superiority for the SMB

Organizations that strive for superiority in their markets are those that focus on strategic success. For many small to mid-sized businesses, this means keeping costs down and implementing practical software solutions to remain competitive. A recent survey conducted by Osterman on messaging in the SMB market indicates that spam protection software is a crucial strategy for the small and mid-sized business IT platform supremacy.

Not only does Ipswitch IMail Server Premium meet the needs of small to mid-sized businesses by providing secure, powerful and affordable collaborative messaging capabilities, IMail Server Premium offers the most comprehensive and edge checking anti-spam protection available. Commtouch differs from other similar-sounding services in terms of its unique breadth of coverage, and its analysis and delivery of information in real-time. Commtouch global detection centers analyze more than two billion Internet transactions per day, providing visibility into network traffic in every location around the world. This critical mass of data is analyzed using Commtouch's patented RPD technology, enabling the real-time delivery of IP address classification. Global-View Mail Reputation Server determines if a particular address is sending spam and/or legitimate email, and if it has been compromised into a zombie. These capabilities enable the GlobalView service to block distributed attacks the moment they start. IMail customers achieve unprecedented performance and detection levels, blocking traffic before it ever enters your networks so you can communicate with the people you need to, without the threat of spam.

IMail Server Premium completes every small business' messaging needs with mobile synchronization and push email solutions. With this feature your employees can meet immediate demands and be as productive with their mobile devices as they are in their traditional office. No one understands better than you how critical timing is when making a sale or responding to the needs of your customer. IMail keeps your organization connected by giving your employees access to on demand information for quick response to the needs of your customers.

## The Value of IMail Server Premium

- > Scalable, standards-based, email server with
- > Enhanced Security with SSL Encryption, SMTP Auth and dictionary attack sensing
- > Premium anti-spam protection provided by Commtouch EDGE checking technology
